Notes

1. Beds dedicated to emergencies were assigned to those Units which actually used them.
2. For Senology and Nuclear Medicine Divisions, the number of actually utilized beds has been calculated taking into account that these Divisions are open just 5 nights a week.
3. Admissions are defined as the number of patients dismissed from the Division in the year, in keeping with SDO information elaborated with "Verbena" software.
4. DH utilization rate has been calculated using the number of Division's opening days as a denominator multiplied by two.
